Vernacular Architecture Towards a Sustainable Future

This book discusses the potential of vernacular architecture in the 21st century. It examines research developments, best practices, and innovations from countries all over the globe; presents the latest research on sustainable building; contains case studies and examples to enhance practical application of the technologies presented. This book discusses applying vernacular strategies to modern architectural design to adhere to basic green principles of sustainability, preservation, and the value of design. Historically successful approaches are integrated with contemporary practices and technologies to create strategies for the future of architecture. This book is a valuable resource for architects, developers, and policymakers in the field of sustainable architecture.

This book offers current, comprehensive, and international perspectives for the application of Vernacular and Earthen Architecture to the planning and development of the built environment. It is also an essential reference for academics and practitioners working in the field of Sustainable Architecture, who need up-to-date knowledge of current practices and discourse on Indigenous peoples and their architecture. The book comprises selected papers from the National Conference on Sustainable Built Environment. The chapters provide insights into the role of traditional knowledge in the design and development of sustainable buildings. This compilation would be of interest to students, researchers, professionals and policy makers.

The book comprises selected papers from the National Conference on Sustainable Built Environment. The chapters provide insights into the role of traditional knowledge in the design and development of sustainable buildings. This compilation would be of interest to students, researchers, professionals and policy makers. The book comprises selected papers from the National Conference on Sustainable Built Environment. The chapters provide insights into the role of traditional knowledge in the design and development of sustainable buildings. This compilation would be of interest to students, researchers, professionals and policy makers. The book comprises selected papers from the National Conference on Sustainable Built Environment.
